

Becs-114. 5701 Cognitive neuroscience I, exam 11.12.2013

Please write a short ~half a page response to each of the following three questions.

1. What is meant with the term executive functions? Are there some brain areas that are more critical than others for executive functions?
2. Describe which type of processing occipital cortical areas carry out, and name some of the functional areas that reside in the occipital lobe.
3. Describe briefly how language is processed in the human brain: what type of language functions there are and which brain areas are thought to be responsible for them?
