

T-106.5250 Distributed systems

Examination 2012-03-09

Only writing tools are allowed in this exam. In each separate answer paper, write the name of the course, the date of the exam, the number of the answer paper and the total number of answer papers (in the form 'paper 1/2'), and your own name, study program, and student number.

Tell also, which edition of the course textbook you have studied (fifth, fourth, or third).

Try to answer clearly. When preparing the answer for an essay, think first what you know about the subject and make some notes. Remember that the subject may have been described in several chapters of the book. Design an outline for your answer and only after that start writing. You can use subsection headers to make your answer clearer.

1. (12p) Give a short answer to following questions (max. 100 words per question):
 - (a) Give a definition of distributed system.
 - (b) What are the ACID properties of transactions?
 - (c) In what circumstances can the byzantine generals problem be solved?
 - (d) For what purposes is public key cryptography useful in distributed systems?
 - (e) What are logical clocks and logical time, and why are they needed?
 - (f) What are the pros and cons of using threads instead of multiple processes?
2. (6p) Essay: Remote invocation. Describe different forms of remote invocation and their implementation.
3. (6p) Essay: Peer-to-peer systems.
4. (6p) Essay: Publish/subscribe.
